

BNFL Training Courses

Current Training Schedule

BNFL training is scheduled based on the requirements of the project—the regulatory requirements and the tasks actually being performed on the job. This allows us to be as “real-time” as possible in providing the training that is needed in a efficient manner. BNFL training is customized to include site-specific instructions and instructional guides. This makes the training more practical and relevant to the ETTP work environment.

The following training classes have been scheduled to date beginning with October 1999. This schedule is updated on a daily basis.
